

GigUP TriCounty is more than just bringing speed to the Lowcountry; it brings your technology experience to life!

Time to "Gig UP" to the fastest, clearest, most advanced way to receive high quality Broadband, Video and Voice service. With symmetrical speeds up to 1 Gbps, nearly 40 times faster than the average internet connection, you can download movies faster, share thousands of photos in minutes and use multiple devices in your home without losing a second of speed. Homes that have "Gigged Up" with Home Telecom are technologically advanced and are ready for the services of tomorrow.

Other telecom providers frequently boast about their fiber optic networks. While those fiber networks may be in your area, their connections to homes and businesses are much slower because they are non-fiber. And, since a chain is only as strong as its weakest link, you end up not getting all the benefits of fiber. Home Telecom, on the other hand, provides a fiber optic connection directly into every home and business. Complete, reliable and redundant access to the rest of the world is available. And, it is fast!!!

Our gigabit internet services offer three distinct advantages. First, its broader bandwidth accommodates the ever-increasing amount of data that travels over the internet. Second, it is faster- nearly 40 times faster- than the average internet services today. And finally, it is symmetrical which enables users to send information at the same speed at which they receive it.

Fiber infrastructure with gigabit speeds is a bet on the future. Laying down fiber that fosters 40 times the power of other networks may exceed current needs, but positions the community on the cutting edge of technology. The most exciting thing about having a 100% fiber network with gigabit capability is being ready to power the ideas that haven't even been conceived yet. It's time to Gig UP, TriCounty!
