

Hosted PBX / VoIP ComVERGE by Home Telecom is revolutionizing the way businesses communicate today. ComVERGE utilizes VoIP (Voice over Internet Protocol) technology to transfer voice into digital data and then transmit those 'packets' over a secure data connection. As a Hosted PBX offering, the PBX switching infrastructure resides in our network and gives you all of the features and control of a traditional PBX system—plus advanced features and web-based tools, without all of the costs associated with a premises-based solution. In addition, since your voice packets are fully managed over our private network, you are guaranteed secure communication with the same voice quality to which you are accustomed.

ComVERGE Benefits

- **Reduce your communication costs** by eliminating the expenses involved with the purchase, lease or maintenance of a premises-based PBX. In addition, calling costs are cut with package pricing that includes local and long distance minutes and calling features.
- **Decrease telecom support and hassles** by using the web-based portal to manage your own moves, adds, and changes. In addition, employees can set up their own voice mail, call routing and profiles quickly and easily. Plus, disaster recovery is built in. Stay connected with your customers during emergencies by setting up rerouting for inbound calls to mobile numbers or an unaffected location, either in advance or real-time from any Internet connection.
- **Improve employee productivity** with advanced calling features. Assign one number that travels with your employees—calls are intelligently routed to their mobile, home, office or anywhere they designate. Also, employees are able to spend less time retrieving and wading through messages, and more time acting on them. With unified messaging employees can view, prioritize, and even email voice and fax messages.

Imagine having a
telephone conversation
that sounds so real, it's like
being face to face with someone.

Now you can with HD Voice.

Home Telecom has partnered with Polycom to offer you the latest advances in sound technology. HD Voice unlocks a frequency range unavailable with traditional telephone service to deliver over twice the clarity of ordinary phone calls for life-like, vibrant conversations, which significantly boosts word recognition. You can hear every word without repeating, saving you time and cutting down on misunderstandings. With echo cancellation, noise reduction technology and advanced voice processing, HD Voice offers the greatest achievement in sound quality.

Professional Business Services for only \$44.95 a month!
Save an additional 40% with contract pricing and multiple lines!

Whether you need just a few lines, or you have multiple locations with multiple employees, Home Telecom's ComVerge can meet the unique needs of your employees and business. For only \$44.95 per line you can take advantage of over 70 personal and group calling features, including advanced features such as Shared Line Appearance, Music on Hold and MessagingUnified. Plus, you will receive a minimum of 500 long distance minutes (for 1–9 lines) that you can share across the company. The more lines you have, the more minutes you get. All that and the convenience of a web-based portal so you can manage your services yourself.

For details on features and long distance minutes, visit www.HomeSC.com or call us.

* Pricing listed is non-contract pricing for businesses with 1-9 lines. Discounts up to 40% are available with contract pricing and for businesses with more than 9 lines. Please contact a Home Telecom Business Services Sales representative at 843-761-9101 or 843-277-7307 for a quote. ComVerge service is not traditional telephone service and may be limited or unavailable in instances of power failure or loss of Internet service. Due to these circumstances, E911 service may also be limited or unavailable. In addition, an emergency 911 call made from your ComVerge telephone may not alert the dispatcher to your address unless you have updated your address with the E911 database. Do this every time you relocate your IP telephone. To update, visit our Web site or contact us directly.
